

I am Azhen Hasan Jarjes. I studied four years bachelor about physics in the University of Duhok. And I was the top of my class. Therefore I get a chance to work in the Duhok University as an assistant of physics. I Know three languages (Kurdish, English, and Arabic). And I have these skills (Microsoft Word, Powerpoint, Excel, Solid-Work, NX simulation, SPECTR, Geant 4).

Assistant of Physics:

University of Duhok

October 2011- present (2 years 2 month)

In this period I was assistant of physics in the department of physics and I worked in the different labs such as (Electricity (1st year), Thermodynamic (2nd year), Electronic (3rd year), Solid state physics (4th year)).

Master Degree:

University of Leicester

September 2014 (1 year)

I obtained my Master from the University of Leicester in United Kingdom in (Space exploration System). After I got the HCDP (Human Capacity Development Program) chance to study abroad. My master was about exploring space, designing missions to different planet, explore while there is a life in space, and where could be a future leaving land like earth in the future. During my course I have learned different software skills and modelling such as (Solid work, NX Simulation, Geant 4). In my dissertation I used NX simulation to design a spacecraft and also a Geant 4 which is used by NASA and ESA space industrial for radiation analysis in every mission.

Also I presented my dissertation for A very professional company in producing a rocket in NASA Space industry (Lockheed Martin) which is an American global aerospace, defense, security and advanced technologies company with worldwide interests.

Assistant of lecturer

September 2016

I get my master certification at 1st of January 2016. I worked in mechanic lab for a year 2016. For new studying year 2016- 2017 I will teach Astrophysics as a selective subject for the 4th year student, In addition with teaching in thermodynamic lab.
